

## Proficiency Index™ Results

The Customer Information Graph below displays your Proficiency Index™ (PI) results based on the information you provided on the customer information form (Page 2). From this graph, you can easily see how your information compares to the baselines created for crew and single-pilot curriculums. Please see pages 6-8 for an explanation of these various PI categories.

The Proficiency Index™ results indicate that you are eligible for the **Single-Pilot Type-Rating Curriculum**. No other training courses are required to attend the Single-Pilot Type-Rating Course.

*Note: FlightSafety's Garmin G-1000 eLearning course is highly recommended for pilots without previous G-1000 experience.*

You may choose to enroll in the Single-Pilot Type-Rating Course, or the Crew Type-Rating Course. Since the Citation Mustang is a single-pilot certificated aircraft, holding a single-pilot type-rating allows you to pilot your Citation Mustang alone without a second-in-command (SIC). At the beginning of your training, you will be teamed with another pilot. The first day you will fly as a crew then transition to the single pilot environment for the duration of training.

Please review the Pre-Course Training Options on page 4. These courses are not required, however, they will be a great benefit to your success in the Single-Pilot Type-Rating Curriculum.
